

Barangay App Libuna / Sambajon / Sabordo

App Overview

The Barangay Mobile Application System is a digital platform designed to streamline community services and emergency response for residents of Barangay Alijis. It provides one-touch SOS signaling, local issue reporting with photo evidence, and a simplified way to manage appointments and view official announcements.

Getting Started

To begin using the app, you must authenticate through the Login Screen.

1. **Open the App:** Launch the application on your mobile device.
2. **Enter Credentials:** Use the following test credentials for Iteration 2:
 - o **Email:** testuser@chmsu.edu.ph
 - o **Password:** password123
3. **Login:** Press the "Login" button. If the fields are empty or invalid, you will see inline error messages.

Feature Walkthrough

The app is organized into five primary tabs via a bottom navigation bar:

-  **Home:** View your resident profile and a quick overview of your current community status.
-  **News:** Stay updated with the latest barangay-wide announcements fetched in real-time from the database.
-  **SOS (Emergency):** In case of danger, press the SOS button to capture your precise GPS coordinates and alert barangay responders immediately.
-  **Report:** File a community report (e.g., waste, road damage) by adding a description and a photo from your gallery or camera.
-  **Profile:** Edit your personal information, update your password, or view/clear your local movement history logs.

Troubleshooting & Empty States

- **Empty News/Reports:** If no data is available for a tab, you will see a "No data available" message with an icon, indicating the system is waiting for new entries.
- **GPS Errors:** If the SOS screen cannot lock your location, ensure your phone's GPS is on and you are not inside a building that blocks signals.
- **Login Issues:** If you are logged out unexpectedly, the system will redirect you to the Login screen to re-authenticate.
